DETAILED ACTION

1. This application claims benefit of 60/463,064 filed April 15, 2003.

Request for continued examination (RCE)

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 26, 2007 has been entered.

In Request for continued examination (RCE), Applicants amended claims 1, 4 and 13 and added new claims 21-27.

Claims 1-27 are currently pending in the application.

Allowable Subject Matter

3. Claims 1-27 are allowed.

With respect to claims 1, 13 and 23, the prior art of record does not teach or suggest placing a polymer composite over at least a portion of the dielectric layer in an atmosphere to form drain and source contacts, the polymer composite having a conducting filler, in combination with the rest of the other limitations of claims 1, 13 and 23.

With respect to claim 4, the prior art of record does not teach or suggest depositing a polymer composite having a conducting filler to form a second contact pattern with the dielectric layer; wherein the second contact pattern is deposited using a solution-based process, in combination with the rest of the other limitations of claim 4.

With respect to claims 21 and 26, the prior art of record does not teach or suggest depositing a polymer composite having a conducting filler to form a second contact pattern with the

dielectric layer; wherein the act of depositing the polymer composite is performed by a printing technique selected from: stencil printing and inkjet printing, in combination with the rest of the other limitations of claims 21 and 26.

With respect to claim 22, the prior art of record does not teach or suggest depositing a polymer composite having a conducting filler to form a second contact pattern with the dielectric layer; wherein the act of depositing the polymer composite is performed with the conducting filler selected from a group consisting of: graphite, silver, carbon, conducting derivatives of carbon, and gold, in combination with the rest of the other limitations of claim 22.

With respect to claim 24, the prior art of record does not teach or suggest a polymer composite connected with the dielectric layer, the polymer composite providing a second contact pattern, the second contact pattern having a first portion and a second portion, where the first portion and the second portion are separated by a distance; and wherein the polymer composite is a polymer thick-film ink having a conducting filler, in combination with the rest of the other limitations of claim 24.
